

Social Media Mining

Case Study : Event Detection in Twitter

Based on 'Event Detection in Twitter' by Jianshu Weng, Bu-Sung Lee ICWSM 2011

Presented by :

Yue HE & Falitokiniaina RABEARISON

Motivation

social events
parties
baseball games
presidential campaign

disastrous events
storms
fires
traffic jams
riots
heavy rain-falls
earthquakes

Network contains **22** nodes and **19** edges.

After using Newman Alg, we find **6** clusters(event).

The events' significance is presented by weights of the edges between keywords and the lengths of the event.

Historical Events for November 2009

Months in 2009: [January](#) [February](#) [March](#) [April](#) [May](#) [June](#) [July](#) [August](#) [September](#) [October](#) [December](#)

Events 1 - 9 of 9

1st - The inaugural Abu Dhabi Grand Prix is held at the Yas Marina Circuit.

3rd - 23rd Soul Train Music Awards: Michael Jackson, Charlie Wilson & Chaka Khan win

5th - US Army Major Nidal Malik Hasan (US Army Medical Corps) killed 13 and wounded 43 at Fort Hood, Texas in the largest mass shooting ever at a US military installation.

9th - Joe Cada becomes the youngest champion of the World Series of Poker's main event.

11th - 43rd Country Music Association Awards: Taylor Swift & Brad Paisley win

22nd - 36th American Music Award: Taylor Swift & Michael Jackson win
23rd - The Maguindanao massacre occurs in Ampatuan, Maguindanao, Mindanao, Philippines

25th - Powerful storm brings 3 years worth of rain in 4 hours to Jeddah, Saudi Arabia, sparking terrible floods known as the 2009 Jeddah Floods, which kill over 150 people and sweep thousands of cars away right in the middle of Hajj in the second largest city of Saudi Arabia, Jeddah.

29th - 97th CFL Grey Cup: Montreal Alouettes defeats Saskatchewan Roughriders, 28-27

CONCLUSION

Conclusion

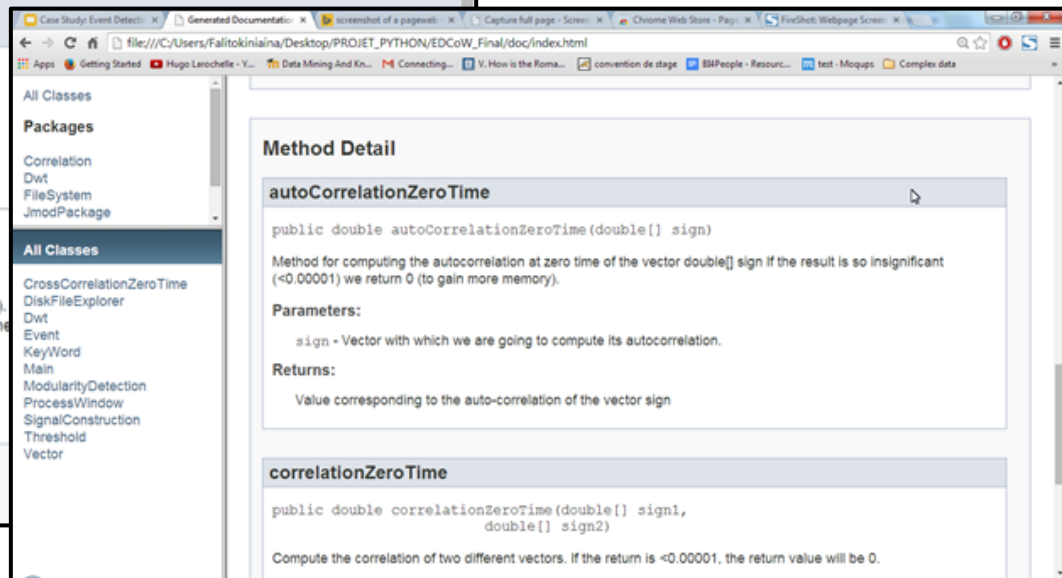

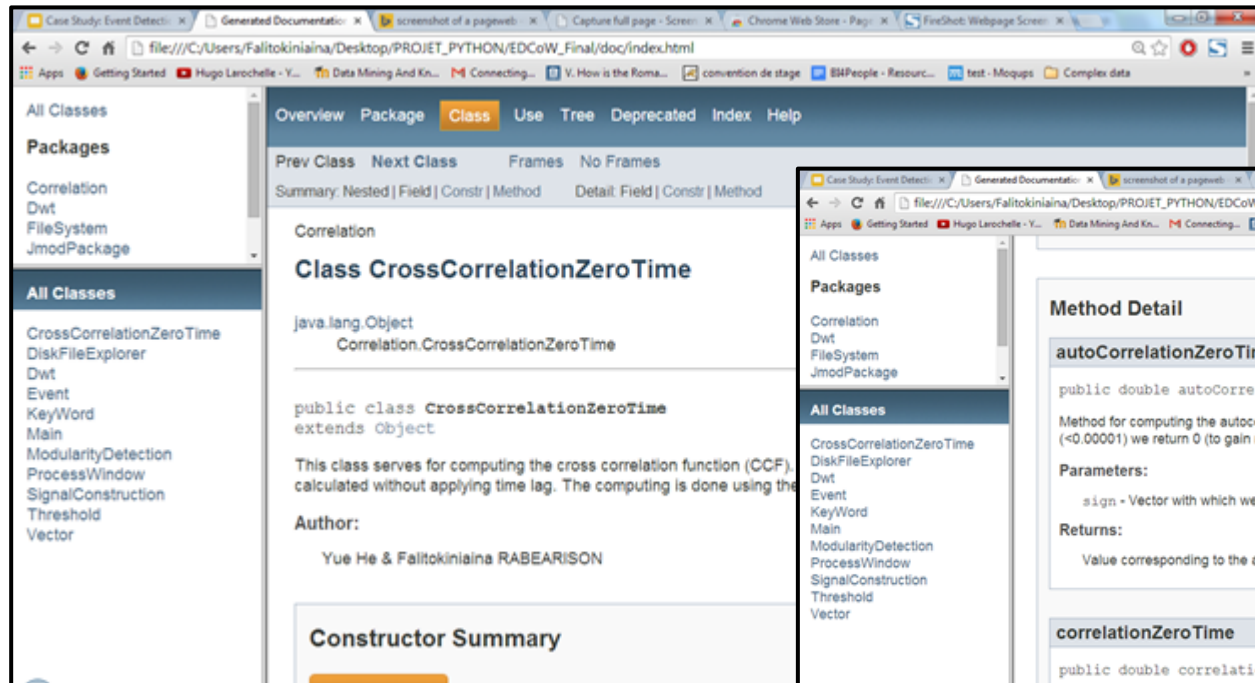

- After studying and implementing the Event Detection with Clustering of Wavelet-based Signals Algorithm in Java, we find it works in different time period. We also try to use different parameters to evaluate it on the twitter dataset.
- Some places to improve:
- How to control the parameters?
- How to let the keywords(events) make sense?
- It need some background to translate the combined keywords into event.
- How to utilize the results from public opinion?

Integrate EDCoW into SONDY

Thanks Adrien :)

EDCoW [Javadoc]

Case Study -- Detect Event in Social Network (20/03/2014 -- 18/06/2014)

Task Schedule							
ID	Meeting Time	Target Task	What we did				
1	20/03/2014	- present the paper EDCoW - the workload - the work flow - the deadlines - how you will be evaluated	- present the paper EDCoW(1/2) - divide the case study into 3 parts [1. study the EDCoW 2. implement the EDCoW in the platform of SONDY 3.critical analysis of EDCoW]	5	17/4/2014	- aim: load big file with all the keywords, output the result in one file - analysis the real data from pro, try to explain the result (shown in the matlab) - make sure the code to be correct	everything is done
				6		- the level number should not be the input - change the wavelet family - change the delta(the size of sliding window) - find the lib in Java to comput the <u>Cross Correlation</u>	everything is done
2	21/03/2014	Learning Basic Wavelet Knowledge from Jairo	- Wavelet Families - CWT - DWT[wavelet expression, quantities, how to measure the similiarity between signals--> shannon wavelet entropy]				
3	3/4/2014	- finish the presentation - implement DWT [compute coefficient in each scale/the shannon wavelet entropy in matlab]	- finish the presentation - Implement DWT in Java and MATLAB - Compare the results in different software - use java for the further work - criteria of grading : * Provide clean code * Documents for code	7	25/04-2014	- play with the parametrs - [modify the code to generate files for gephi input] - [play with gephi] - screenshots (signals transform, bar of autocorrelation, matrix of crosscorrelation, clusters of the graph) - import Jmod to do the cluster	everything is done
				8	9/5/2014	implementation : clean : not write on harddrive [ok] flag : debug true/false [ok] epsilon : number(18)[ok] put 0 instead of 0.000000001 (using JMT) sparse vector, matrix [ok] return (sum<0.00001)?0:sum; not put the tsv in the hard [ok] time window parameter : one day <u>size of the window</u>	everything is done
4	11/4/2014	- make the code easy to read - code till SWE function with : input :words signals - do some experiments in real data - send the code on Thursday 10-04-2014 - build function in MATLAB to plot data (Technical meeting for real data / plot some data)	- make the code easy to read - code till SWE function with : input :words signals output: construction of signal in the first step and second step - build function in MATLAB to plot data	9	5/2014 -- 6/2014	clean the code; correct mistakes; finish the documentation; finish the slide for presentation	

Acknowledge

Thank *Jairo Cugliari* & *Adrien Guille* for your guides, comments and discussions!

DISCUSSION

Thanks for your attention! ;)
